EXTREME RESISTANCE

AT NJORD

WE BELIEVE THAT WOOD
IS MORE THAN JUST
RAW MATERIAL

It is an element of the space where you relax, create, and feel free. That's why we created impregnates that not only protect but also truly support the durability of wood – with the same care you put into what matters.

Our advanced ProtecXt technology works like armor – it effectively protects wood from the sun, rain, snow, and the passage of time, preserving its natural character for years to come. And all this in a safe formula for you, your surroundings, and the environment – without harmful solvents or compromises.

By choosing Njord, you choose peace of mind, durability, and reliable protection – even in the most extreme conditions.

The Njord impregnating agent for wood is the ideal Scandinavian-inspired solution. It is a product that combines beautiful colours with excellent wood protection. It is easy to apply, leaves no streaks and provides an aesthetically pleasing, flawless surface appearance. At the same time, it protects against the damaging effects of UV rays and other atmospheric influences, providing up to 9 years of protection. Thanks to Bio ProtectX technology, the impregnating agent forms a hydrophobic film that is also resistant to fungi and algae. It is ideal for both indoor and outdoor use. It is an environmentally friendly product that guarantees a pleasant working environment without inhaling harmful solvents.

Njord Extreme Impregnating Agent represents a new quality in wood protection and care. It enhances the natural beauty of the wood and brings out the growth rings. The product's formula ensures very easy application, fast drying and an aesthetic appearance for years without the effect of the coating flaking off. It protects the wood from the damaging effects of atmospheric factors such as UV radiation and precipitation. Thanks to Bio ProtectX technology, it forms a hydrophobic film that is also resistant to fungi and algae. Developed on the basis of Scandinavian conditions, it strengthens the wood and provides protection for up to 12 years. Njord Extreme Impregnating Agent does not contain any harmful solvents, which is good for the user's health, comfort and the environment.

Njord's UV Blocker is an innovative clear wood impregnating agent enriched with a special UV filter. It provides the best protection against the harmful effects of sun, frost, rain and snow for up to 12 years. This advanced formula prevents the wood from losing its colour and protects against darkening and yellowing. Thanks to BIO ProtectX technology, Njord's UV Blocker creates a hydrophobic, durable coating on the wood surface that is resistant to algae and fungi. It is designed to protect the health of users and the environment, so it does not contain any harmful solvents in its composition.

acrylic
stains

Njord Separating Primer – a unique product designed to give a flawless finish to painted wood. It is the ideal base for the care and protection of hardwoods and exotic woods, effectively blocking the migration of tannins and preventing yellowing and darkening of the top layer. It reduces surface absorbency and improves adhesion, making it effective and practical to use. The product facilitates the application of subsequent top coats. It is recommended for use under light-coloured enamels, varnishes, decorative impregnating agents, stain varnishes and acrylic stains. Its composition, free from harmful solvents, ensures safe use for both the user and the environment.
